Allowable Subject Matter

1. Claims 8, 10, 11, 15, 17-19, 21, 24, 25, 28 and 30-35 are allowed.
2. The following is an examiner's statement of reasons for allowance for claims 8 and 15:

The prior art fails to teach "An image-capturing device, comprising: an image sensor that captures a subject image and generates image data; an operation member that is operated by a user to cause the image sensor to capture a subject image and generate image data and to record image identification information with regard to the image data transferred to the detachable portable memory on a temporary basis so that the image data transferred to the detachable portable memory on a temporary basis and the image data transferred to the detachable portable memory in the case that the detachable portable memory is set as the storage device can be distinguished from each other" in combination with other claimed elements.

[Claim 31] : The prior art fails to teach or suggest "An image-capturing device, comprising: an image sensor that captures a subject image and generates image data; an operation member that is operated by a user to cause the image sensor to capture a subject image and generate image data; a memory; and an image storage control unit that controls transfer of image data, and is operable in a communication mode, to automatically transfer the image data generated by the image sensor in response to operation of the operation member by the user from the image-capturing device to an external device via a communication circuit capable of communicating with the external device to store the image data in the external device, and when communication with the external device is disabled, to transfer the image data generated by the image sensor to the memory so that the operation member can be operated to cause the image sensor to capture a next subject image, wherein the communication circuit is capable of communicating with the

external device by at least a first wireless communication method and a second wireless communication method, and attempts the second wireless communication method when communication with the external device is failed by the first wireless communication method”.

[Claim 32]: The prior art fails to teach or suggest “An image-capturing device, comprising: an image sensor that captures a subject image and generates image data; an operation member that is operated by a user to cause the image sensor to capture a subject image and generate image data; and an image storage control unit that controls transfer of image data, and is operable in a communication mode, to automatically transfer the image data generated by the image sensor in response to operation of the operation member by the user from the image-capturing device to a first external device via a communication circuit capable of communicating with the first external device to store the image data in the first external device, and when communication with the first external device is disabled, to transfer the image data generated by the image sensor to a second external device via the communication circuit capable of communicating with the second external device to store the image data in the second external device so that the operation member can be operated to cause the image sensor to capture a next subject image, wherein: an image storage control unit transmits a command from the image-capturing device to the second external device to transfer the image data to the first external device from the second external device where the image data have been stored on a temporary basis without involving the image-capturing device in case that the first external device becomes has become available, when transferring the image data to the second external device”.
